

Experiment 1: rm, users, tree

Aim

To understand and practice the usage of the following basic Linux commands:

- `rm` - Remove (delete) files or directories
- `users` - Display the usernames of users currently logged in
- `tree` - Display directory structure in a tree-like format

Procedure

1. Open the Terminal in Kali Linux (Ctrl + Alt + T).
2. Create a sample file for testing `rm`:
`touch testfile.txt`
3. Verify the file exists:
`ls testfile.txt`
4. Remove the file using `rm`:
`rm testfile.txt`
5. Confirm deletion:
`ls testfile.txt`
6. Display currently logged-in users:
`users`
7. Display directory tree structure:
`tree`
8. Display tree with limited depth (optional):
`tree -L 1`

Sample Output / Results

rm command:

```
$ touch testfile.txt
$ ls testfile.txt
testfile.txt
$ rm testfile.txt
$ ls testfile.txt
ls: cannot access 'testfile.txt': No such file or directory
```

users command:

```
$ users
kali    (or list of logged-in usernames; may be empty if only one session)
```

tree command:

```
$ tree -L 1
.
├── testdir
2 directories, 0 files
```

```
kali@kali: ~/LinuxLab
