

Experiment 11: Nmap Aggressive & Insane Speed Scans

Aim

To perform high-speed Nmap scans using aggressive and insane timing templates:

- -T4 (Aggressive) - Faster scan, assumes reliable network
- -T5 (Insane) - Extremely fast scan, may miss packets on slow networks

Procedure

1. Open Terminal.
2. Perform Aggressive speed scan:
`nmap -T4 -p 1-100 scanme.nmap.org`
3. Perform Insane speed scan:
`nmap -T5 -p 1-100 scanme.nmap.org`
4. Compare the scan completion time shown at the end of each output.

Sample Output / Results

(i) Aggressive Speed Scan (-T4):

```
$ nmap -T4 -p 1-100 scanme.nmap.org
PORT      STATE SERVICE
22/tcp    open  ssh
80/tcp    open  http
Nmap done: 1 IP address (1 host up) scanned in 1.85 seconds
```

(ii) Insane Speed Scan (-T5):

```
$ nmap -T5 -p 1-100 scanme.nmap.org
PORT      STATE SERVICE
22/tcp    open  ssh
80/tcp    open  http
Nmap done: 1 IP address (1 host up) scanned in 0.92 seconds
```

Note: -T5 is fastest but can be less accurate on congested networks.

```
