

Experiment 2: less, more, vi

Aim

To understand and practice text viewing and editing commands:

- `less` - View file content page by page (allows backward navigation)
- `more` - View file content page by page (forward only)
- `vi` / `vim` - Powerful text editor for creating and editing files

Procedure

1. Open Terminal.
2. Create a sample text file:
`echo -e "Line 1\nLine 2\nLine 3\nLine 4\nLine 5" > sample.txt`
3. View the file using `less` (press `q` to quit):
`less sample.txt`
4. View the file using `more` (press `Space` for next page, `q` to quit):
`more sample.txt`
5. Open the file in `vi` editor:
`vi sample.txt`
6. Inside `vi`: Press `i` to enter Insert mode, type text, press `Esc`, then type `:wq` and `Enter` to save & quit.
7. To quit without saving: press `Esc`, type `:q!` and `Enter`.

Sample Output / Results

less / more command:

```
$ less sample.txt    (or more sample.txt)
Line 1
Line 2
Line 3
Line 4
Line 5
(END) or :    - press q to exit
```

vi command:

```
$ vi sample.txt
Opens the vi editor interface showing the file content.
Bottom of screen shows: "sample.txt" [New File] or similar.
After :wq - file is saved and editor closes.
```
